Dedusting for Zurich-based water supply

15.04.2016 News

The Zurich-based water supply uses a dedusting filter type Infa-Jet AJN.

Within the water treatement the Zurich-based water supply changed the additive for neutralisation from lime to soda. After delivery the mineral salt is filled with a compressor into two $80~\text{m}^3$ storage silos.

Venting of the silos during the loading process is carried out via a pipe system with dedusting filter type Infa-Jet AJN. This filter replaces firstly one of two aged dedusting units.

For designing the pocket filter a volume flow of 1,200 m^3/h and a dust load of 5-10 g/m^3 were considered.

Infastaub was responsible for dismantling the old filter unit as well as for mounting and commissioning of the new one.
