Ideal dedusting solution for Innov'ia, specialist for spray drying

04.04.2019 News

INNOV'IA is specialist for manufacturing of tailor-made powders that are gained by spray drying. When processing different kinds of powder, problems occurred especially with volatile substances.

INNOV'IA is specialist for manufacturing of tailor-made powders that are gained by spray drying. In La Rochelle, France, different powder products are produced by using different technologies as spray drying, co-drying, granulation, agglomeration, microencapsulation and coating technologies. Especially the food industry belongs to their fields of application.

When processing different kinds of powder, problems occurred especially with volatile substances. It wasn't possible to regain the filtered dusts back for production. Instead the dust had to be removed from the floor. This caused production loss and at the same time safety of the operating personnel was harmed and environmental rules could not be met.

The planners finally chose a bag filter AJV 800 made of stainless steel in order to comply with food safe production.

The head of production of INNOV'IA explains the choice: „Noise reduction was very important for us. Infastaub solved the demand with an external fan. Additionally the flow

capacity of the filter is high. This enables a better capture of dust emissions at the source.

Since INNOV'IA is convinced by the performance of the filter, two further filter plants will be assembled in summer.
